

İZZET CAN SORNA

Istanbul, Turkey | izzet4626@gmail.com | +90-534-087-9034
[linkedin.com/in/izzetcansorna](https://www.linkedin.com/in/izzetcansorna) | github.com/JustSuffer | izzetportfolio.netlify.app

PROFESSIONAL SUMMARY

Machine Learning Engineer specializing in Computer Vision and production-grade AI systems, with hands-on experience building medical imaging solutions, autonomous robotics, and scalable deep learning pipelines using PyTorch and YOLOv11. Passionate about translating complex research and datasets into deployable, high-performance technical products.

EDUCATION

Marmara University

B.S., Department of Mechatronics Engineering – **GPA: 3.10**

Istanbul, Turkey
Sep 2020 – Jul 2025

Nişantaşı Nuri Akın Anatolian High School

High School Diploma

Istanbul, Turkey
Jun 2020

SKILLS

- **Programming:** Python, C++.
- **ML & Computer Vision:** PyTorch, YOLOv11, OpenCV, ResNet, MobileNet, TensorFlow, Keras, Scikit-learn, Pandas, NumPy.
- **Cloud & DevOps:** Oracle Cloud Infrastructure, Docker, Linux, GitHub Actions.
- **Web & APIs:** FastAPI, REST APIs, React.js, JavaScript, HTML/CSS.
- **Tools:** Git, Google Colab, MATLAB, Arduino.

PROFESSIONAL EXPERIENCE

FlyRank AI

Machine Learning Engineer Intern

Remote
Jun 2026 – Present

- Engineered and evaluated machine learning models, applying core AI fluency principles to optimize data processing pipelines, reducing data preparation time by 35%.
- Accelerated model training processes across 10+ datasets by focusing on advanced feature engineering, hyperparameter tuning, and cross-validation techniques.
- Evaluated models in staging environments, formulating alternative technical solutions to ensure robust edge-case handling prior to production rollouts.

Bluesense | AI-Powered Software and Services

AI Engineer Intern

Boston, MA (Remote)
Dec 2025 – Present

- Formulated computer vision solutions using ResNet, MobileNet, and YOLOv11 to precisely detect and classify skin concerns, trained on a 3.5K+ labeled dataset with an 80/20 validation split.
- Optimized high-performance deep learning models using transfer learning on Google Colab, achieving 98% precision and 97.03% recall in diagnostic accuracy across 100+ real-world user samples.

INNOEM | Sustainability and Innovation Consultancy

Frontend Developer Intern

Istanbul, Turkey
Aug 2024 – Jan 2025

- Architected responsive, user-friendly web interfaces utilizing React.js and Tailwind CSS, improving page load speed by 30%.
- Collaborated closely within a cross-functional team of 7 to enhance UI/UX and optimize front-end architecture.

Albil Merkezi Hizmetler | Information Technologies
ICT Network Engineer Intern

Istanbul, Turkey
Jul 2024 – Aug 2024

- Orchestrated the organization's information systems, ensuring zero downtime and secure access for 5,500+ daily internal queries.
- Monitored network infrastructure and systematically diagnosed system anomalies by evaluating alternative technical root causes, deploying efficient data storage protocols.

Turkish Technic | Technology on Board
Aircraft Maintenance Engineer Intern

Istanbul, Turkey
Aug 2023 – Sep 2023

- Executed detailed mechanical and technical maintenance on complex aircraft systems at Atatürk Airport's main hangar.
- Assisted in root-cause analysis for hardware malfunctions, strictly adhering to international aviation safety standards.

PROJECTS

Computational Medical Imaging Quantification Research

Jul 2026

- Spearheaded a computer vision research manuscript focusing on AI-assisted medical imaging, submitted to Multimedia Tools and Applications (**Under Review**).
- Trained a robust object detection model utilizing YOLOv11 on an RMI dataset specifically for brain imaging, achieving an mAP score of 97.04%.

Metsuke - Autonomous Quadruped Robot

Mar 2026

- Architected and programmed an autonomous quadruped robot assistant utilizing an ESP32-S3 microcontroller and C/C++ in a real-time operating environment.
- Integrated complex servo motor kinematics and WebSocket communication protocols, achieving a 15ms response time in sensor data processing.
- Engineered a dynamic obstacle avoidance and motion planning system, significantly improving navigational stability on uneven terrain.

Artificial Intelligence in Droopy Lower Eyelid

Jan 2026

- Developed an end-to-end computer-vision diagnostic tool using YOLOv11, Python, and OpenCV to quantify lower eyelid malposition in real-time by dynamically calculating key surgical metrics like MRD2.
- Achieved 98% precision (mAP@50) and sub-millimeter accuracy through a custom resolution-scaling algorithm on a dataset of 3K+ clinical images, eliminating manual caliper errors.
- Optimized model inference time to 20ms per frame, ensuring seamless deployment viability for clinical hardware.

Motion Tracking Turret with Image Processing

Aug 2025

- Programmed a real-time motion tracking turret system integrating custom hardware and advanced computer vision algorithms.
- Implemented object tracking features utilizing Keras and OpenCV in Python, operating at 36 FPS under varying lighting conditions.

ADDITIONAL INFORMATION

Languages: English (Professional Working Proficiency), Turkish (Native)
